

ARE YOUR CUSTOMERS MISSING THE CATCH OF THE DAY?

Foulfree 15 ml kit

Model #FF15k

“Developed from the industry’s best foul-release technology and in conjunction with world experts AIRMAR, Foulfree™ is a specialised coating protecting transducers from marine growth. Fouling on the face of transducers greatly diminishes the performance, resulting in poor fish-finder detail, while increasing the risk of damaging vulnerable components by scrubbing hard growth. Harnessing the trusted PropSpeed® technology, Foulfree™ keeps transducers running at peak performance.”

THE FIRST COATING CERTIFIED BY AIRMAR TO BE SAFE FOR TRANSDUCERS, FOULFREE™ BRINGS THE BELOW KEY BENEFITS:

- Maintains clarity and detail below the waterline, delivering peak performance to customers.
- Prevents damage caused by removing barnacles and hard growth.
- Eases maintenance for up to 2 years.
- Foul-release, not antifoul: a slick coating that does not poison marine organisms.

Aquatic growth can accumulate rapidly on the transducer’s surface, reducing its performance within weeks. With Foulfree™, customers make the most of the latests advances of fish-finding technology.

The 15 ml Foulfree™ kit includes:

- 1 x XDclean wipe
- 1 x Foulfree™ 15 ml tube
- 1 x applicator brush
- 1 x abrasive pad

Order 8 kits and receive a free POS display box. The outer box contains 8 units.
